# **Web Services-Share Route-APP**

## <u>1.0 Login</u>

ID	NAME	DESCRIPTION	INPUT	OUTPUT
1.1	logIn	login to app	user passwd	success = {true    false} m = error message
1.2	signIn	register new user	user passwd name age gender email	success = {true    false} m = error message
1.3	logOut	logout from app	user passwd	success = {true    false} m = error message

# 1.1 logIn

Flow

json query structure

```
"LOG":[
    "logIn",
    "jyjy",
    "7658yuk",
    1
]
```

index	type	example	name
0	string	logIn	function name
1	string	Υίγί	user account name max length 30 characters
2	string	7658yuk	password max length 30 characters

```
3 bit 1 debug flag (optional) justa can have value = 1
```

### json answer structure

correct

```
{
    "success":"true"
}
```

error

```
{
    "success":"false",
    "m":"Error 1"
}
```

error-debug

```
"success":"false",
"m":"Error 1",
"debug":{
        "structure validation":"ok",
        "send query":"rico qwerty",
        "email validation":"ok",
        "password validation":"fail"
}
```

name	type	Description
success	string	true or false
m	string	message only for error messages:  • Error 0:     malformed structure  • Error 1:     function not recognized  • Error 2:     invalid user or password

# 1.2 signIn

json query structure

```
"LOG":[
    "signIn",
    "jrico",
    "sweet2665",
    "DK",
    26,
    "M",
    1,
    "drkphp@gmail.com"
]
```

index	type	example	name
0	string	signIn	function name
1	string	jrico	name max length 30 characters
2	string	sweet2665	password max length 30 characters
3	string	DK	user name or nick name max length 30 characters
4	int	26	age
5	char	М	gender only accept M or F
6	int	1	account type registration  1 = email  2 = facebook  3 = twitter  4 = google plus

7	string	drkphp@gmail.com	account user name registration
8	bit	1	debug flag (optional) justa can have value = 1

## json answer structure

correct

```
{
    "success":"true"
}
```

error

```
"success":"false",
"m":"Error 1"
}
```

name	type	Description
success	string	true or false
m	string	message only for error messages:  • Error 0:

	<ul> <li>Error 7:         registration account already used</li> <li>Error 8:         invalid type registration</li> </ul>
--	--

# 1.3 logOut

json query structure

```
"LOG":[
    "logOut",
    "jyjy",
    "7658yuk"
]
```

#### Fields description

index	type	example	name
0	string	logOut	function name
1	string	ΥΕΎ	user account name max length 30 characters
2	string	7658yuk	password max length 30 characters
3	bit	1	debug flag (optional) justa can have value = 1

# json answer structure correct

```
{
    "success":"true"
}
```

error

```
"success":"false",
"m":"Error 1"
}
```

name	type	Description
success	string	true or false
m	string	message only for error messages:
